

SERGEY EMELYANOV

Senior Software Engineer · PHP / Go

Email: pochtasergeia@gmail.com

Phone: +7 (918) 276-2533

Location: Moscow, Russia

Portfolio: fighter90.github.io

PROFESSIONAL SUMMARY

Senior Software Engineer (PHP / Go) with 14+ years of experience in backend development of high-load web services and enterprise platforms. Track record across leading Russian BigTech and fintech companies: Rambler&Co, Lamoda Tech, MTS Fintech, Gazprombank Electronic Trading Platform, and Avito.

Specialize in microservice architecture design (including DDD principles), integration of relational and NoSQL databases, event-driven architecture on Apache Kafka and RabbitMQ, and end-to-end performance optimization. Confident in code review, mentorship, and technical leadership (formal tech lead at MTS Fintech), task decomposition and estimation, and documenting architecture and APIs in Confluence. Actively leverage AI tooling (Cursor, Claude Code, OpenAI API, Anthropic API) to accelerate development and improve code quality.

Domain expertise: ad-tech (bidding and auctions, ad platform billing); fintech (centralized configuration microservice, RBAC); electronic trading platforms compliant with Russia's 44-FZ and 223-FZ federal procurement laws with integration to the UIS (zakupki.gov.ru); classifieds billing (Avito); international high-load social product with millions of profiles; OTA short-term rental service scaled from MVP.

KEY ACHIEVEMENTS

- **Rambler&Co (Championat), 2024 — present:** designed and delivered 10+ Go microservices to production; contributed to the decomposition of the PHP/Symfony monolith; redesigned the portal authorization system.
- **Lamoda Tech, 2022–2024:** migrated all team services from PHP 7.4 to PHP 8.1; optimized CI/CD pipelines (~30% faster change delivery); adapted services to mandatory goods labeling (“Chestny Znak” / CRPT).
- **MTS Fintech, 2020–2021 (tech lead):** built from scratch a centralized configuration microservice (feature flags, tariffs, business rules, admin panel) following DDD principles; independently designed and implemented the RBAC subsystem; raised test coverage to 85%.
- **Rambler&Co (Rambler Ad Platform), 2021–2022:** enhanced the Go-based bid management service for advertising positions; evolved asynchronous service communication via Apache Kafka.
- **Gazprombank ETP, 2016–2020:** implemented integration with the Unified Information System (zakupki.gov.ru) in compliance with 44-FZ and 223-FZ; delivered a dedicated billing microservice for bidders on Phalcon Framework.
- **Sutochno.ru, 2011–2015 (middle → senior growth):** helped bring the OTA service from prototype to a stable product serving hundreds of thousands of guests; designed the auction system for promoting listings and a custom payments analytics system (~90% automation of routine accounting operations per the finance team).

PROFESSIONAL EXPERIENCE

Senior Software Engineer — PHP / Go

Rambler&Co

Mar 2024 — Present

Moscow, Russia

Responsibilities

- Develop and maintain portal services on a PHP 8 / Symfony 4 and Go stack.
- Design and implement new microservices in Go — both from scratch and as evolution of existing services.
- Participate in decomposing the PHP / Symfony 4 monolith, extracting functionality into separate services.
- Integrate and optimize work with MySQL, PostgreSQL, and MongoDB.
- Organize asynchronous inter-service communication via Apache Kafka.
- Write unit and integration tests (PHPUnit, Codeception).
- Conduct code reviews and uphold corporate coding standards.
- Refactor, fix bugs, and optimize existing code.
- Maintain Docker environments for local development and testing.
- Document services and critical functionality in Confluence.
- Decompose and estimate tasks.

Key Results

- Designed and delivered to production more than 10 Go microservices — some built from scratch, some as extensions of existing services.
- Contributed to breaking up the PHP / Symfony 4 monolith: extracted functionality into separate services, reducing coupling and simplifying further platform development.
- Redesigned the portal authorization system — a critical subsystem for user access management.
- Delivered several integration services with external systems: data exchange via REST APIs and asynchronous messaging in Apache Kafka.
- Maintained consistent team-wide coding standards through systematic code review.
- Authored technical documentation for services in Confluence — streamlining onboarding of new developers and cross-team collaboration.

Stack: PHP 8, Symfony 4, Go, MySQL, PostgreSQL, MongoDB, Redis, Apache Kafka, RabbitMQ, PHPUnit, Codeception, Docker, Confluence, GitLab.

PHP Developer

Lamoda Tech

Oct 2022 — Feb 2024

Moscow, Russia

Responsibilities

- Developed internal services on a PHP 8 / Symfony 4 / PostgreSQL stack.
- Migrated services to current PHP versions and updated Symfony dependencies.
- Wrote unit and integration tests (PHPUnit, Codeception).
- Fixed bugs, conducted code reviews, upheld coding standards.
- Performed technical analysis, decomposition, and estimation of critical tasks.
- Configured and optimized Docker environments and CI/CD pipelines.
- Adapted services to new regulatory requirements (integration with Russia's mandatory goods-labeling system "Chestny Znak" / CRPT).

Key Results

- Migrated all team services from PHP 7.4 to PHP 8.1 — reduced technical debt, moved to an actively maintained branch with security support, and eliminated deprecated and unsafe constructs.
- Updated key Symfony components to compatible versions — ensuring long-term framework support and ecosystem compatibility.

- Optimized CI/CD pipelines for service deployment — reduced production delivery time by approximately 30%.
- Covered core service scenarios with unit and functional tests (PHPUnit, Codeception).
- Adapted services to expanded goods categories subject to mandatory labeling (“Chestny Znak” / CRPT) — the company met regulatory requirements on schedule with no penalties.

Stack: PHP 8, Symfony 4, PostgreSQL, PHPUnit, Codeception, Docker, GitLab CI.

Senior PHP Developer

Nov 2021 — Jul 2022

Rambler&Co (Rambler Ad Platform)

Moscow, Russia

Responsibilities

- Developed and maintained advertising-platform services on PHP 8 / Symfony 4.
- Enhanced the Go-based bid management service for advertising positions.
- Designed and evolved internal REST APIs for inter-service communication across the platform.
- Integrated asynchronous inter-service communication via Apache Kafka.
- Wrote unit tests (PHPUnit).
- Conducted code reviews and enforced code quality standards.
- Maintained Docker environments for local development.

Key Results

- Enhanced the Go-based bid management service for advertising positions — a key subsystem directly affecting revenue of the display network.
- Extended and optimized the banner bid management subsystem across adjacent platform projects.
- Improved the advertiser reporting generation subsystem — accelerated report generation and simplified the addition of new metrics.
- Evolved internal REST APIs of the ad platform: expanded functionality and optimized endpoint performance.
- Refactored critical modules of the ad platform — improved readability and maintainability, reduced regression risk for further development.
- Covered key service scenarios with unit tests — improving release reliability.
- Produced comprehensive technical documentation and REST API specifications for internal consumers.

Stack: PHP 8, Symfony 4, Go, MariaDB, Redis, Apache Kafka, RabbitMQ, PHPUnit, Docker.

Senior PHP Developer (Tech Lead)

Nov 2020 — Nov 2021

MTS Fintech

Moscow, Russia

Responsibilities

- Technical team lead: architectural decisions, technology selection, code quality oversight.
- Developed and maintained internal services on a PHP / Laravel + Orchid / PostgreSQL stack.
- Designed the architecture of new services following DDD principles.
- Designed data models and database migrations in PostgreSQL.
- Conducted code reviews and mentored team developers.
- Refactored existing modules and optimized performance.
- Covered code with automated tests (PHPUnit).
- Documented architecture, APIs, and business processes in Confluence.
- Estimated, decomposed, and distributed tasks within Scrum.

Key Results

- Built from scratch a centralized configuration management microservice for internal fintech services — feature flags, tariff settings, business rules, and an admin panel — providing a single source of truth in place of scattered per-service settings.

- Designed the architecture following DDD principles: identified bounded contexts, aggregates, value objects, and repositories — cleanly separating domain and infrastructure layers for easier maintenance and extension.
- Independently designed and implemented the RBAC subsystem: role and permission model, database tables and relationships, and access control at both API and admin UI levels.
- Delivered two usage contexts: an API for other services (programmatic consumers) and an Orchid-based UI for product managers, analysts, and operations (human users).
- Championed the team's adoption of the Laravel + Orchid stack — accelerating creation of admin panels and typical CRUD interfaces.
- Raised test coverage of key scenarios to 85% with unit and functional tests.
- Ran comprehensive code reviews across team services, rolled out PSR standards, and improved code consistency.
- Collaborated with the Product Owner on new module concepts — strengthening the link between business requirements and technical solutions.
- Organized task estimation and distribution within the team — making Scrum planning more predictable.
- Produced complete technical documentation in Confluence: APIs, ER models, and use cases.

Stack: PHP, Laravel, Orchid, PostgreSQL, Redis, PHPUnit, JavaScript, Docker, Confluence, GitLab.

Senior PHP Developer

Nov 2016 — Aug 2020

Gazprombank Electronic Trading Platform (ETP)

Moscow, Russia

Responsibilities

- Maintained and evolved the etpgpb.ru web service in the corporate procurement segment.
- Designed and developed server-side modules in PHP (Phalcon Framework, Zend Framework).
- Designed and implemented dedicated microservices for integrations with external systems and payment infrastructure.
- Enhanced front-end modules of the system in Ext JS.
- Refactored and profiled the codebase, optimizing performance.
- Conducted code reviews.

Key Results

- Implemented integration with the Unified Information System (zakupki.gov.ru) via a dedicated Phalcon-based microservice — ensuring procurement data exchange compliant with Russia's 44-FZ and 223-FZ federal laws.
- Evolved the etpgpb.ru bidding system: shipped key platform functionality in the corporate procurement segment, covered critical areas with tests, and extended front-end modules in Ext JS.
- Delivered a dedicated billing microservice for bidders on Phalcon Framework: account top-ups and tariff payments for participation in procurement procedures.
- Integrated new payment instruments into the billing microservice — cards, acquiring, and Russia's Faster Payments System (SBP).
- Migrated the project from PHP 5.6 to PHP 7 — substantially improving backend performance thanks to the new engine.
- Ran deep refactoring of critical code paths with XHPProf profiling, preemptively covering changed areas with PHPUnit tests to guard against regressions.
- Optimized complex SQL queries against PostgreSQL — reducing response time for critical bidding-system queries.
- Enhanced the Sphinx-based full-text search over procurement announcements and bidder applications.

Stack: PHP 5.6 / 7, Phalcon, Zend Framework, Laravel, PostgreSQL, Redis, Memcached, Sphinx, JavaScript, Ext JS, RabbitMQ, PHPUnit, GitLab, YouTrack.

PHP Developer

Jul 2016 — Oct 2016

Avito

Moscow, Russia

Responsibilities

- Maintained and evolved modules of the Avito.ru payment subsystem.
- Designed and implemented server-side billing components in PHP.
- Integrated and maintained payment service APIs.
- Enhanced the billing microservice and added new payment instruments.

Key Results

- Integrated card payments via the MIR national payment system into the billing microservice — expanding payment options for private users of Avito in line with the Russian market's shift to the national payment system.
- Improved stability of the payment pipeline: reduced the number of errors during payment processing (confirmed via monitoring).

Stack: PHP, PostgreSQL, RabbitMQ, Redis.

PHP Developer

Jul 2015 — Jul 2016

Mamba (Tourbar.com)

Moscow, Russia

Responsibilities

- Maintained and enhanced the tourbar.com web service (high-load, international product).
- Designed and implemented new functional modules.
- Integrated and maintained payment service APIs (PayPal, Paymentwall) for the premium subscription.
- Integrated and maintained social network APIs (Twitter, VK, Facebook, Google, Instagram).
- Developed and evolved REST APIs for iOS and Android mobile applications.
- Optimized PHP and SQL code for working with large volumes of user profiles.

Key Results

- Developed REST APIs from scratch for Tourbar mobile apps (iOS and Android) — covering key endpoints for content and profile management.
- Built a proprietary marketing-email subsystem (digests, trip selections) with audience segmentation by geography, interests, and activity — combining a custom PHP implementation with an external email-provider integration; increased email open rates (confirmed via analytics).
- Enhanced full-text search and user filters on Elasticsearch — enabling fluent work with a multi-million-profile database and flexible search criteria.
- Implemented real-time display of online users.
- Integrated PayPal and Paymentwall for the premium subscription.
- Refactored existing code — improving readability, modularity, and maintainability.
- Enhanced the admin panel: added tooling for sending marketing campaigns and moderating user photos.

Stack: PHP, PostgreSQL, Elasticsearch, Redis, Memcached, RabbitMQ.

Senior PHP Developer

Oct 2011 — Jul 2015

Sutochno.ru

Ulyanovsk, Russia

Joined the project at an early product stage and grew from middle to senior over 3+ years, contributing to bringing the service from prototype to a stable product with thousands of hosts and hundreds of thousands of guests.

Responsibilities

- Designed and developed key server-side modules of sutochno.ru.

- Integrated external payment systems (Robokassa, PayU, Yandex.Checkout) and OAuth authorization via social networks.
- Optimized application architecture and PHP / SQL code for growing load.
- Developed client-side features (billing, calendar, paid services) with responsive layout.
- Contributed to the development of related holding projects — maintaining architectural consistency.

Key Results

- Helped move the project from early prototype to a stable service with an audience of hundreds of thousands of guests.
- Designed and implemented a unified payment intake layer across Robokassa, PayU, and Yandex.Checkout — unifying work with heterogeneous payment providers.
- Designed and implemented an auction system for promoting listings to the top (users bid and win positions) — increased conversion of paid services (confirmed via dashboard measurements).
- Built the booking calendar subsystem for rental properties — increased the number of bookings after rollout (tracked via product analytics).
- Designed a custom analytics system for payment tracking and accounting reports — automating, per the finance team's own estimate, up to 90% of routine operations.
- Delivered the paid-services subsystem for promoting listings to the top.
- Implemented client-side billing, calendar, and paid services with responsive layout across screens (HTML5, CSS, JavaScript, jQuery).
- Implemented social login via Twitter, VK, Facebook, Google, and Yandex over OAuth 2.0.
- Ran deep codebase refactoring with XHProf profiling, preemptively covering changed areas with PHPUnit tests to guard against regressions.
- Optimized complex SQL queries against MySQL for growing data volumes.
- Used MongoDB for logs and analytics storage and Sphinx for full-text search over listings.

Stack: PHP, MySQL, MongoDB, Sphinx, HTML5, CSS, JavaScript, AJAX, jQuery, JSON.

EDUCATION

Master's Degree, IT Product Management
HSE University (Higher School of Economics)

2025 — 2027 (expected)
 Moscow, Russia

Faculty of Business Informatics.

Specialist Degree, Information Systems & Technologies
Ulyanovsk State Technical University (UISTU)

Graduated 2012
 Ulyanovsk, Russia

Faculty of Information Systems and Technologies — Information Systems and Technologies in Computer Graphics Systems.

TRAINING & CERTIFICATIONS

- **Software & IT Solutions Development Project Management** — module “IT Project Management” (customized course), Luxoft Training, 2015.

TECHNICAL SKILLS

Programming Languages	PHP (5 / 7 / 8), Go (Golang), JavaScript
Frameworks	Symfony, Laravel, Phalcon, Zend, Yii 1 / 2

Relational Databases (SQL)	MySQL, PostgreSQL, MariaDB
NoSQL Databases	MongoDB, Redis, Memcached
Messaging / Queues	Apache Kafka, RabbitMQ
Search Engines	Elasticsearch, Sphinx
Testing & Automation	PHPUnit, Codeception
Containerization	Docker, Kubernetes
APIs / Web Services	REST API, SOAP
Authorization Standards	OAuth 1.0, OAuth 2.0
Version Control	GitLab, GitHub, Bitbucket
Project Management / Issue Tracking	Jira, YouTrack, Confluence
Monitoring & Observability	Grafana, Prometheus, Kibana, Sentry
Engineering Practices	OOP, SOLID, design patterns, test writing, high-load design, microservice architecture, DDD, refactoring, code review, mentorship
IDEs	PhpStorm, GoLand, DataGrip, VS Code, Cursor
AI Tooling & Practices	Cursor, Claude Code, OpenAI Codex CLI, Anthropic API, OpenAI API, Replit AI, Prompt Engineering
Other	Linux server administration, CI/CD pipelines, Smarty, jQuery, HTML5, CSS, AJAX

LANGUAGES

- **Russian** — Native.
- **English** — B2 (Upper-Intermediate); actively improving toward C1.

ADDITIONAL INFORMATION

Citizenship: Russia · **Work format:** On-site, remote, or hybrid · **Employment type:** Full-time

Availability: Open to relocation and business travel.
